## Directory-enabled network elements

CPOL No.: 41685 Seq No.: 1414 Status: Pending Submitted: Modified:

## Idea Details

## Inventors:

[Email Inventors](#)Fan Jiao ([fjiao](#)) *Employee has left Cisco.*Raymond Bell ([rabell](#)) *Employee has left Cisco.*

Ramprasad Golla ([rgolla](#)) Phone: 408 527-8261 Manager: [hopprich](#) Dept: PNDI - JDP  
Type: Regular Division: Network Management Site: SAN JOSE SITE 5 Info: [Cisco Directory](#)

**Background:** CNS (Cisco Network Services) started working on Directory-enabled agents

under IOS for all cisco IOS devices (1600, 25xx, 4xxx, 26xx, 36xx, 7xxx, ls1010, 12xxx, and c5xxx w/ router switch module) in The project "CNS for IOS 12.0.4" is being released in IOS 12.0.4. The follow-up project "CNS for IOS II" is under way for IOS 12.0.5 release. There will be "CNS for IOS III" targeted for IOS 12.0.6, and "CNS for IOS IV" for IOS 12.1.1 release. Eventually all work will be ported into IOS ENA sometime late of this year or early next year.

**Prior Art:** ---

**Summary:** Directory-enabled Network Element is a state-of-art technology to enable smart, user-friendly, and network service managed network elements. By using the technology, well-defined network services offered by the network elements can be easily associated with users. A set of core Directory Services agents are built into router software (IOS) such that a router is authenticated to Directory automatically when it is powered up just like an ordinary workstation. Those agents provide network services on behave of the network services directly to authorized users.

**Restatement:** ---

**Advantages:** 1. ISPs love this technology. It will enable ISPs to offer comprehensive, flexible, and competitive network services to their customers.

2. It is an excellent solution to solve the scalability problems of configuring/provisioning network services. No manual provisioning would be required any more.

3. It will allow seamless integration with CNS/AD and MS/AD.

4. It will allow use of CNS DEN extensions which is DEN compliant.

**Cisco Use:** A. CNS Client for IOS is being released in IOS 12.0.4. It is part of the following images/platforms:

1. Enterprise Images

c5200-j-l 5200

c5300-j-mz 5300

c7200-js-mz 7200

rsp-jsv-mz 7505/07/13/RSP7000

c5rsm-jsv-mz Cisco 5000 (router module addon card for cat 5000)

2. Enterprise 40 Images:

B. CNS for IOS II is being developed for IOS 12.0.5 release

C. CNS for IOS III is in part of IOS release road map

**Public Use:** not yet.

**Detecting Use:** Lucent started working on its Directory-enabled work using Novell's NDS for its switch products since late last year.

One should be able to detect its infringement by closely watching Lucent product announcements.
